

Context Free Grammar

Module 3

Definition of a Context Free Grammar

Definition 4.1 Represented by 4-tuple (V_N, T, P, S) where

- (i) V is a set of variables
- (ii) Σ or T is a set of terminals
- (iii) S is a start symbol and $S \in V$
- (v) P is a set of productions or rules of the form $A \rightarrow \alpha$ where A is a variable and α is a string of variables and terminals i.e. $\alpha \in (V \cup \Sigma)^*$

Context free Grammar

- Have a natural recursive notation
- Defines Parse trees
- Parse tree is a picture of the structure that a grammar places on the strings of its language.
- Pushdown Automata describes all and only the context free languages

Applications of Context free Grammar

- Parse tree construction and Compiler design
- XML, Document type Definition (DTD)

Applications of Context free Grammar

- Played a central role in Compiler technology since the 1960s
- They turned the implementation of parsers from a time consuming, ad-hoc implementation task into a routine job that could be done quickly

Example Revisited

position = initial + rate * 60

Lexical Analyzer

$\langle \text{id}, 1 \rangle \langle = \rangle \langle \text{id}, 2 \rangle \langle + \rangle \langle \text{id}, 3 \rangle \langle * \rangle \langle 60 \rangle$

Syntax Analyzer

$$\begin{array}{c} \text{=} \\ \swarrow \quad \searrow \\ \langle \text{id}, 1 \rangle \quad + \\ \quad \swarrow \quad \searrow \\ \quad \langle \text{id}, 2 \rangle \quad * \\ \quad \quad \swarrow \quad \searrow \\ \quad \quad \langle \text{id}, 3 \rangle \quad 60 \end{array}$$

Semantic Analyzer

$$\begin{array}{c} \text{=} \\ \swarrow \quad \searrow \\ \langle \text{id}, 1 \rangle \quad + \\ \quad \swarrow \quad \searrow \\ \quad \langle \text{id}, 2 \rangle \quad * \\ \quad \quad \swarrow \quad \searrow \\ \quad \quad \langle \text{id}, 3 \rangle \quad \text{inttofloat} \\ \quad \quad \quad \downarrow \\ \quad \quad \quad 60 \end{array}$$

Intermediate Code Generator

1	position	...
2	initial	...
3	rate	...

SYMBOL TABLE

Example Revisited

Intermediate Code Generator

```
t1 = inttofloat(60)
t2 = id3 * t1
t3 = id2 + t2
id1 = t3
```

Code Optimizer

```
t1 = id3 * 60.0
id1 = id2 + t1
```

Code Generator

```
LDF    R2, id3
MULF   R2, R2, #60.0
LDF    R1, id2
ADDF   R1, R1, R2
STF    id1, R1
```

Context free Grammar:Example 1

$G = (\{S, C\}, \{a, b\}, P, S)$ where P consists of

$S \rightarrow aCa$

$C \rightarrow aCa \mid b$

Find the language generated by G

Context free Grammar:Example 1

$G = (\{S, C\}, \{a, b\}, P, S)$ where P consists of

$S \rightarrow aCa$

$C \rightarrow aCa \mid b$

Find the language generated by G

$S \rightarrow aCa$

by using $S \rightarrow aCa$

$\rightarrow aaCaa$

by using $C \rightarrow aCa$

$\rightarrow aaaCaaa$

by using $C \rightarrow aCa$

$\rightarrow aaaabaaa$

by using $C \rightarrow b$

$$L(G) = \{a^n b a^n \mid n \geq 1\}$$

Context free Grammar:Example 2

$G = (\{S\}, \{a, b\}, \{S \rightarrow aSb, S \rightarrow ab\}, S)$

Find the language generated by G

Context free Grammar:Example 2

$G = (\{S\}, \{a, b\}, \{S \rightarrow aSb, S \rightarrow ab\}, S)$

Find the language generated by G

$S \rightarrow aSb$

by using $S \rightarrow aSb$

$\rightarrow aaSbb$

by using $S \rightarrow aSb$

$\rightarrow aaaSbbb$

by using $S \rightarrow aSb$

$\rightarrow aaaabbbb$

by using $S \rightarrow ab$

$$L(G) = \{a^n b^n \mid n \geq 1\}$$

Context free Grammar: Example 3

Construct CFG to generate a set of palindromes over the alphabet $\{a,b\}$

Context free Grammar:Example 3

Construct CFG to generate a set of palindromes over the alphabet $\{a,b\}$

When we read palindrome in forward or reverse manner, we get the same thing. In a Palindrome the start and end symbols are same.

Thus, the productions are

$$S \rightarrow aSa \mid bSb$$
$$S \rightarrow \epsilon \mid a \mid b$$
$$G = (\{S\}, \{a, b\}, \{S \rightarrow aSa \mid bSb, S \rightarrow \epsilon \mid a \mid b\}, S)$$

Context free Grammar:Example 4

Construct a CFG generating $L(G) = \{0^n 1^{2n}, n \geq 1\}$

Context free Grammar:Example 4

Construct a CFG generating $L(G) = \{0^n 1^{2n}, n \geq 1\}$

Properties of L:

Start with 0 and end with 1

Number of 1's is two times greater than 0

Thus, the productions are

$S \rightarrow 011$

$S \rightarrow 0S11$

$G = (\{S\}, \{0, 1\}, \{S \rightarrow 011 \mid 0S11\}, S)$

Context free Grammar:Example 5

Consider the alphabet $\Sigma = \{a, b, (,), +, *, \cdot, \varepsilon\}$. Construct a CFG that generates all strings in Σ^* that are RE over the alphabet $\{a, b\}$

Context free Grammar: Example 5

Consider the alphabet $\Sigma = \{a, b, (,), +, *, ., \epsilon\}$. Construct a CFG that generates all strings in Σ^* that are RE over the alphabet $\{a, b\}$

$L = a^*, b^*, a + b, a . b, (a + b), a, b, \epsilon$

$R \rightarrow R + R$

$R \rightarrow R . R$

$R \rightarrow (R)$

$R \rightarrow R^*$

$R \rightarrow a \mid b \mid \epsilon$

$G = (\{R\}, \{a, b, (,), +, *, ., \epsilon\}, \{R \rightarrow R + R \mid R . R \mid (R) \mid R^* \mid a \mid b \mid \epsilon\}, R)$

Example

Construct a CFG generating $L(G) = \{ a^i b^j c^k \mid i, j, k \geq 0 \text{ and } i+j = k \}$

Example

Construct a CFG generating $L(G) = \{ a^i b^j c^k \mid i, j, k \geq 0 \text{ and } i+j = k \}$

- $S \rightarrow aSc \mid X$
- $X \rightarrow bXc \mid \epsilon$

Lecture 29/3/2022

Derivation

Paramasivan-

- The process of deriving a string from start symbol by applying the production of CFG

Hopcraft-

- Use the productions from Head to Body
- Expand the start symbol using one of its productions
- Expand the resulting string by replacing one of the variables by the body of one of its productions
- Until we derive a string consisting entirely of terminals

Derivation-Example 7

Consider the grammar

$G = (\{E\}, \{+, *, (,), id\}, \{E \rightarrow E + E \mid E * E \mid (E) \mid id\}, E)$. Derive the string $(id + id) * id$

Derivation-Example 7

Consider the grammar

$G = (\{E\}, \{+, *, (,), id\}, \{E \rightarrow E + E \mid E * E \mid (E) \mid id\}, E)$. Derive the string $(id + id) * id$

$E \Rightarrow E * E$

By using $E \rightarrow E * E$

$\Rightarrow (E) * E$

By using $E \rightarrow (E)$

$\Rightarrow (E + E) * E$

By using $E \rightarrow E + E$

$\Rightarrow (id + E) * E$

By using $E \rightarrow id$

$\Rightarrow (id + id) * E$

By using $E \rightarrow id$

$\Rightarrow (id + id) * id$

By using $E \rightarrow id$

*

$E \Rightarrow (id + id) * id$

Derivation-Example 8

Consider the grammar

$G = (\{E\}, \{+, *, (,), id\}, \{E \rightarrow E + E \mid E * E \mid (E) \mid id\}, E)$. Derive the string $id + (id * id)$

Derivation-Example 8

Consider the grammar

$G = (\{E\}, \{+, *, (,), id\}, \{E \rightarrow E + E \mid E * E \mid (E) \mid id\}, E)$. Derive the string $id + (id * id)$

$E \Rightarrow E + E$

By using $E \rightarrow E + E$

$\Rightarrow E + (E)$

By using $E \rightarrow (E)$

$\Rightarrow E + (E * E)$

By using $E \rightarrow E * E$

$\Rightarrow id + (E * E)$

By using $E \rightarrow id$

$\Rightarrow id + (id * E)$

By using $E \rightarrow id$

$\Rightarrow id + (id * id)$

By using $E \rightarrow id$

*

$E \Rightarrow id + (id * id)$

Types of Derivation

- Left Most Derivation(LMD)
- Right Most derivation(RMD)

Types of Derivation

Left Most Derivation(LMD)-

- A derivation $A \xRightarrow{*} w$ is called Left most derivation if we apply a production only to the left most variable at every step

Right Most derivation(RMD)

- A derivation $A \xRightarrow{*} w$ is called Right most derivation if we apply a production only to the right most variable at every step

-KLP Mishra

Context free Grammar:Example 9

Consider the grammar $S \rightarrow aAS$, $A \rightarrow SbA$, $S \rightarrow a$, $A \rightarrow ba$ Derive the string $aabbbaa$ using LMD

Context free Grammar:Example 10

Consider the grammar $S \rightarrow aAS$, $A \rightarrow SbA$, $S \rightarrow a$, $A \rightarrow ba$ Derive the string $aabbbaa$ using RMD

Context free Grammar: Example 11

Consider the grammar $G = (\{S\}, \{a, b\},$

$\{ S \rightarrow 0B \mid 1A,$

$A \rightarrow 0 \mid 0S \mid 1AA,$

$B \rightarrow 1 \mid 1S \mid 0BB\}, S\}$

For the string 0110, find RMD.

Context free Grammar: Example 12

Consider the grammar $G = (\{S\}, \{a, b\}, \{$

$S \rightarrow 0B \mid 1A,$

$A \rightarrow 0 \mid 0S \mid 1AA,$

$B \rightarrow 1 \mid 1S \mid 0BB\}, S\}$

For the string 00110101, find the following:

a) LMD

Context free Grammar: Example 12

Consider the grammar $G = (\{S\}, \{a, b\}, \{$

$S \rightarrow 0B \mid 1A,$

$A \rightarrow 0 \mid 0S \mid 1AA,$

$B \rightarrow 1 \mid 1S \mid 0BB\}, S\}$

For the string 00110101, find the following:

b) RMD

Definition of a Derivation tree

- A tree representation of derivations is called derivation trees or parse trees
- It is useful in compilation of programming languages
- The tree structure of the source program makes the translation of source program into executable code easier

Definition of a Derivation tree

A derivation tree/Parse tree for a CFG $G (V_N, \Sigma, P, S)$ is a tree satisfying the following:-

- 1) Every vertex/node of the tree has a label which is variable or terminal or ϵ
- 2) The root has label S
- 3) The label of an internal node is a Variable
- 4) If the interior node is labelled with A and the sons of the vertex are labelled with $X_1X_2....X_n$ from the left then $A \rightarrow X_1X_2....X_n$ must be a production
- 5) A node is a leaf if its label $a \in \Sigma$
- 6) If an vertex has label ϵ then it is a leaf and it is the only one son of its father

Yield of a Derivation tree

Definition:-

Parmasivan-

- If we read the leaves of the derivation tree from left to right order , we get the string or the expression. This is called yield of the tree

KLP Mishra-

- The yield of a derivation tree is the concatenation of the labels of the leaves without repetition in the left to right ordering

Yield of a Derivation tree

Example-Yield of the tree ?

Context free Grammar: Example 14

Find a derivation tree of $a^*b + a^*b$ where G is given by

$S \rightarrow S + S \mid S^* S \mid a \mid b$

Context free Grammar: Example 14

Find a derivation tree of $a^*b + a^*b$ where G is given by

$S \rightarrow S + S \mid S^* S \mid a \mid b$

Context free Grammar: Example 13

Consider the grammar $G = (\{S\}, \{a, b\}, \{ S \rightarrow aAS \mid a, A \rightarrow SbA \mid ba \}, S)$
Show that $S \xRightarrow{*} aabbaa$ and Construct a derivation tree whose yield is aabbaa

Sentential Form

- If $G=(V_N, \Sigma, P, S)$ is a CFG then any string α in $(V \cup T)^*$ such that $S \xRightarrow{*} \alpha$ is a sentential form
- $S \xRightarrow{*} \alpha$, then α is left sentential form
lm
- $S \xRightarrow{*} \alpha$, then α is right sentential form
rm

Ambiguity in Grammar

- The following sentence in English Language:-

“In books selected information is given”

- This Sentence may be parsed in two different ways
- Same situation may arise in CFG

Ambiguity in Grammar

- A CFG is said to be ambiguous if there exist some $w \in L(G)$ that has at least two or more Leftmost Derivation trees or Rightmost Derivation trees.

Ambiguity in Grammar :Example 15

Consider the grammar $G = (\{S\}, \{a, b, +, *\}, P, S)$ where P consists of $S \rightarrow S+S \mid S^*S \mid a \mid b$. Check whether G is ambiguous for the string $a+a^*b$

Ambiguity in Grammar :Example 15

Consider the grammar $G = (\{S\}, \{a, b, +, *\}, P, S)$ where P consists of $S \rightarrow S+S \mid S^*S \mid a \mid b$. Check whether G is ambiguous for the string $a+a^*b$

1st Left Most

Derivation

$S \Rightarrow S+S$

$\Rightarrow a+S$

$\Rightarrow a+S^*S$

$\Rightarrow a+a^*S$

$\Rightarrow a+a^*b$

2nd Left Most

Derivation

$S \Rightarrow S^*S$

$\Rightarrow S+S^*S$

$\Rightarrow a+S^*S$

$\Rightarrow a+a^*S$

$\Rightarrow a+a^*b$

Two LMDS , Thus Ambiguous

Ambiguity in Grammar :Example 16

- Consider the grammar $S \rightarrow aS \mid aSbS \mid \epsilon$. Show that G is ambiguous for the string aab . Further draw their derivation trees

Ambiguity in Grammar :Example 17

- If G is the grammar $S \rightarrow SbS \mid a$, Show that G is ambiguous .

Ambiguity in Grammar :Example 17

- If G is the grammar $S \rightarrow SbS \mid a$, Show that G is ambiguous .
- Lets take string abababa
