

Grammar

Definition of a Grammar

Definition 4.1 A phrase-structure grammar (or simply a grammar) is (V_N, Σ, P, S) where

- (i) V_N is a finite non empty set whose elements are called variables,
- (ii) Σ is a finite non empty set whose elements are called terminals,
- (iii) $V_N \cap \Sigma = \emptyset$
- (iv) S is a special variable (i.e, an element of V_N) called the start symbol
- (v) P is a finite set whose elements are $\alpha \rightarrow \beta$, where α and β are strings on $V_N \cup \Sigma$. α has at least one symbol from V_N . Elements of P are called productions or production rules or rewriting rules.

Definition of a Grammar

- The production rules.

- 1) Reverse substitution is not permitted.

For example, if $S \rightarrow AB$ is a production,
then we can replace S by AB ,
but we cannot replace AB by S .

- 2) No inversion operation is permitted.

For example, if $S \rightarrow AB$ is a production.
It is not necessary that $AB \rightarrow S$ is a production.

Grammar : Example 1

- $G = (V_N, \Sigma, P, S)$ is a grammar
- where
- $V_N = \{\text{<sentence>, <noun>, <verb>, <adverb>}\}$
- $\Sigma = [\text{Ram, Sam, ate, sang, well}]$
- $S = \text{<sentence>}$
- P consists of the following productions:

$\text{<sentence>} \rightarrow \text{<noun> <verb>}$

$\text{<sentence>} \rightarrow \text{<noun> <verb> <adverb>}$

$\text{<noun>} \rightarrow \text{Ram}$

$\text{<noun>} \rightarrow \text{Sam}$

$\text{<verb>} \rightarrow \text{ate}$

$\text{<verb>} \rightarrow \text{sang}$

$\text{<adverb>} \rightarrow \text{well}$

Ram Sam ate well
sang well

N_S, Σ, P, J, S)

If $G = (\{S\}, \{0, 1\}, \{S \rightarrow 0S1, S \rightarrow \Lambda\}, S)$, find $L(G)$

- ✓ $S \rightarrow \square S$
 - ✓ $S \rightarrow A \vee \neg S \quad A \in L(G)$

$$\begin{array}{r}
 5 \rightarrow 0 \overset{5}{\cancel{|}} \\
 0 \overset{5}{\cancel{|}} \downarrow \quad | \rightarrow 0^2 \overset{5}{\cancel{|}} 1^2 \rightarrow 0^2 \overset{L(G)}{\cancel{|}} 1^2 = 0011 \\
 000 \overset{5}{\cancel{|}} 111 \rightarrow 0^3 \overset{5}{\cancel{|}} 1^3 \rightarrow 0^3 \overset{L(G)}{\cancel{|}} 1^3 = 000111
 \end{array}$$

$$\begin{array}{c}
 \xrightarrow{\hspace{1cm}} \begin{matrix} & m \\ & \textcircled{5} \\ \textcircled{5} & S \\ = & \end{matrix} | \quad \begin{matrix} m \\ m \\ m \end{matrix} \\
 \begin{matrix} & m \\ & \textcircled{0} \\ \textcircled{0} & \wedge \\ = & \end{matrix} | \quad \begin{matrix} m \\ m \\ m \end{matrix} \\
 \Rightarrow \begin{matrix} & m \\ & \textcircled{0} \\ \textcircled{0} & | \end{matrix} \quad \begin{matrix} m \\ m \\ m \end{matrix}
 \end{array}$$

Grammar : Example 2

If $G = (\{S\}, \{0, 1\}, \{S \rightarrow 0S1, S \rightarrow \Lambda\}, S)$, find $L(G)$.

Solution

As $S \rightarrow \Lambda$ is a production, $S \xrightarrow{G} \Lambda$. So Λ is in $L(G)$. Also, for all $n \geq 1$,

$$S \xrightarrow{G} 0S1 \xrightarrow{G} 0^2S1^2 \xrightarrow{G} \dots \xrightarrow{G} 0^nS1^n \xrightarrow{G} 0^n1^n$$

Therefore,

$$\underline{0^n1^n} \in L(G) \text{ for } n \geq 0$$

In the above derivation, $S \rightarrow 0S1$ is applied at every step except

in the last step. In the last step, we apply $S \rightarrow \Lambda$)
 $L(G) = \{0^n1^n, n \geq 0\}$

Σ Grammar : Example 3

If $G = (\{ S \}, \{a\}, \{S \rightarrow SS\}, S)$, find the language generated by G.

$S \rightarrow SS$
variable by Σ , no productⁿ

empty lang

$L(G) = \emptyset$

Grammar : Example 3

If $G = (\{ S \}, \{a\}, \{S \rightarrow SS\}, S)$, find the language generated by G .

Solution

- $L(G) = \emptyset$
- Since the only production $S \rightarrow SS$ in G has no terminal on the right-hand side.

Regular Grammar

- Regular grammar is a formal grammar in which every production is restricted to have one of the following forms:-

$A \rightarrow aB$
 $A \rightarrow a$

LHS RHS

_____ {
 ↑ = }

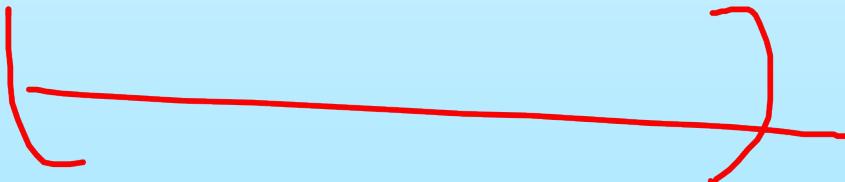

- where A and B are the non-terminals, a is a terminal symbol
- With ϵ productions permitted as special case when $L(G)$ contains ϵ

Regular Grammar

- It is called as regular grammar, because if the format of every production is limited to $A \rightarrow aB$, $A \rightarrow a$
- then the grammar can specify only regular sets and hence there exists a finite automata accepting $L(G)$, if G is regular

Equivalence of Regular Grammar and Finite Automata

- Given a regular grammar G, a finite automata accepting $L(G)$ can be obtained as follows:-
- The number of states of the automata will be equal to the number of non-terminals of the grammar plus one, i.e.
variables
- there will be a state corresponding to every non-terminal of the grammar and one more state will be there, which will be the final state of the automata.

Equivalence of Regular Grammar and Finite Automata

- The state corresponding to the start symbol of the grammar will be initial state of the automata
- If $L(G)$ contains ϵ then make start state also as the final state

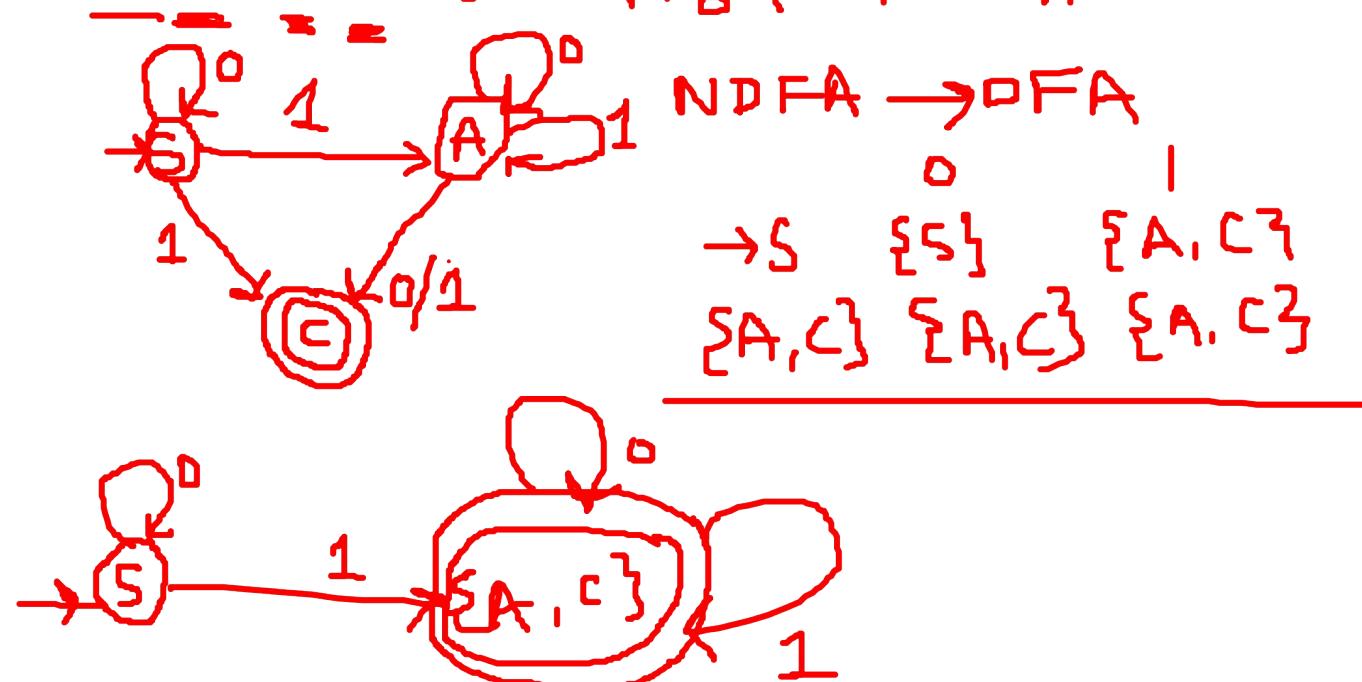

Equivalence of Regular Grammar and Finite Automata

- The transitions in the automata can be obtained as follows:-
- For every production $A \rightarrow aB$ do make
 $\delta(A, a) = B$
- For every ~~production~~ of the form $A \rightarrow a$ do make
 $\delta(A, a) = \text{final state}$

Equivalence of Regular Grammar and Finite Automata-Example 1

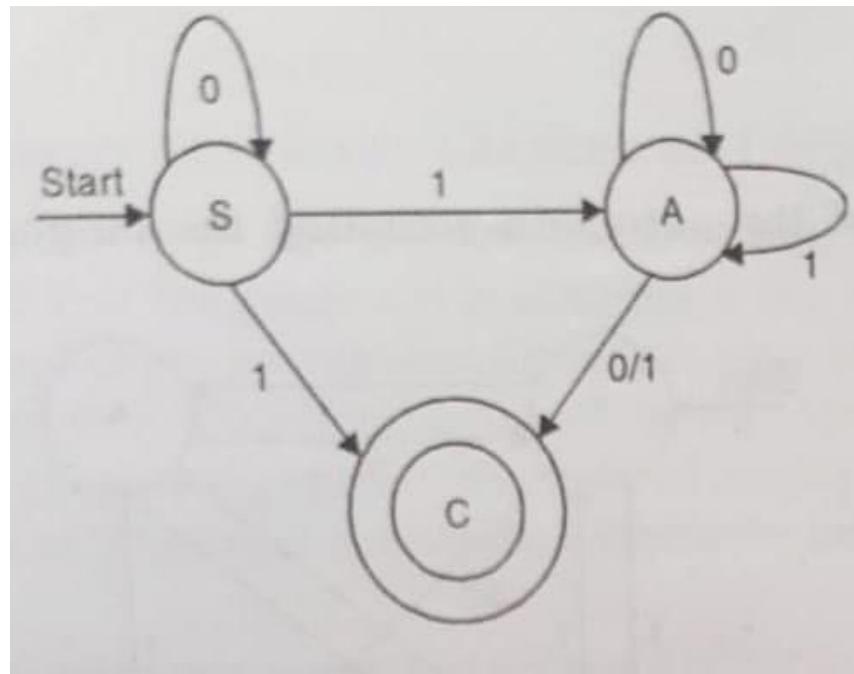

- Consider a regular grammar given below:-

- $S \rightarrow 0S \mid 1A \mid 1$ $s \rightarrow 0s, \delta(s, 0) = s$
- ~~$A \rightarrow 0A \mid 1A \mid 0 \mid 1$~~ $s \rightarrow 1a, \delta(s, 1) = a$

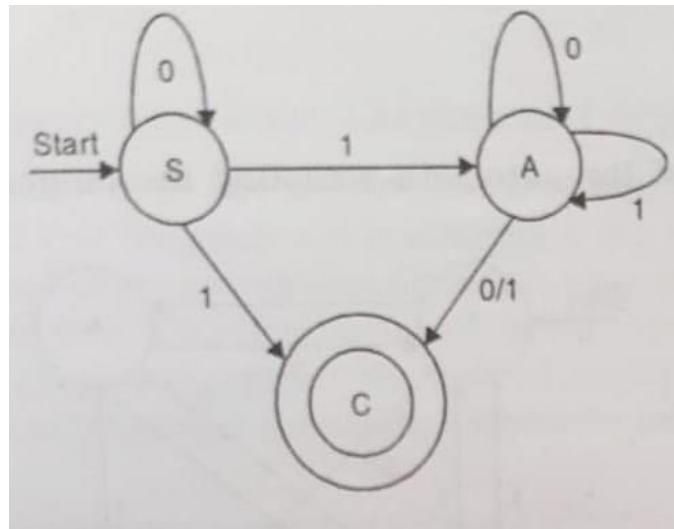

Equivalence of Regular Grammar and Finite Automata-Example 1

- Consider a regular grammar given below:-
- $S \rightarrow 0S \mid 1A \mid 1$
- $A \rightarrow 0A \mid 1A \mid 0 \mid 1$
- Transition Diagram for the finite automata:-

Equivalence of Regular Grammar and Finite Automata-Example 1

- Its NDFA:
- Corresponding DFA transition table:-

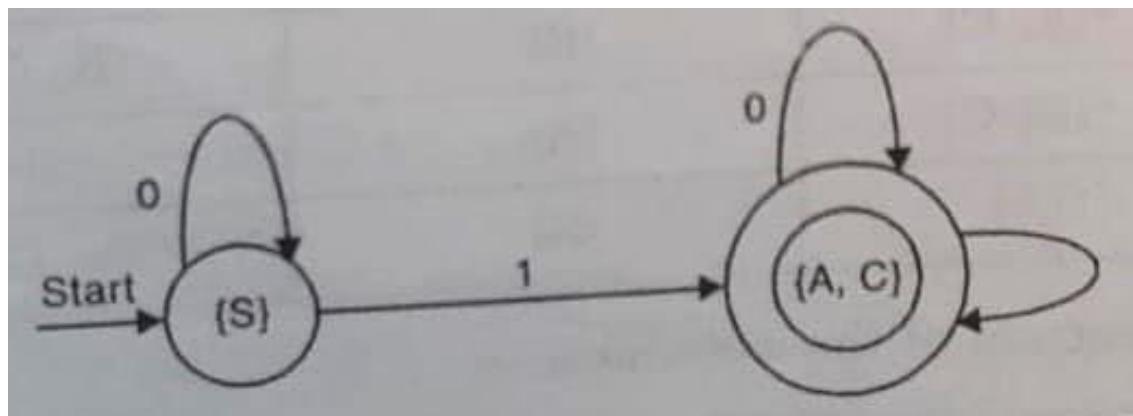

Red handwritten marks: a short red line above the DFA transition table, and a longer red line below it.

Equivalence of Regular Grammar and Finite Automata-Example 1

- Its NDFA:
- Corresponding DFA transition diagram:-

	0	1
{S}	{S}	{A, C}
*{A, C}	{A, C}	{A, C}

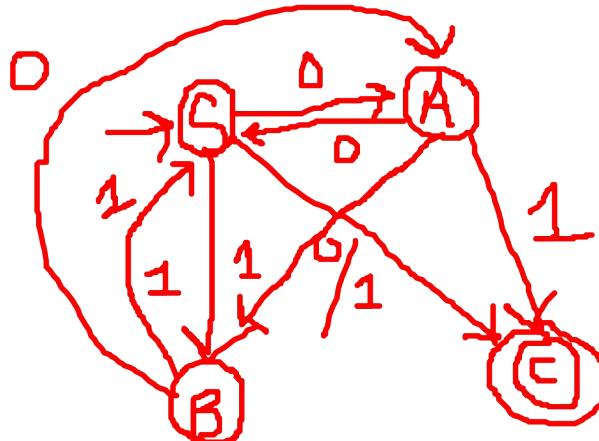

Equivalence of Regular Grammar and Finite Automata-Example 2

- Consider a regular grammar given below:-

$S \rightarrow 0A \mid 1B \mid 0 \mid 1$

$A \rightarrow 0S \mid 1B \mid 1$

$B \rightarrow 0A \mid 1S \quad -$

0 1 ✓

$\rightarrow S \quad \{A, C\} \quad \{B, C\}$

$\{A, C\} \quad \{S\} \quad \{B, C\}$

$\{B, C\} \quad \{A\} \quad \{S\}$

$\{A\} \quad \{S\}$

$\{B, C\}$

Equivalence of Regular Grammar and Finite Automata-Example 2

- Consider a regular grammar given below:-

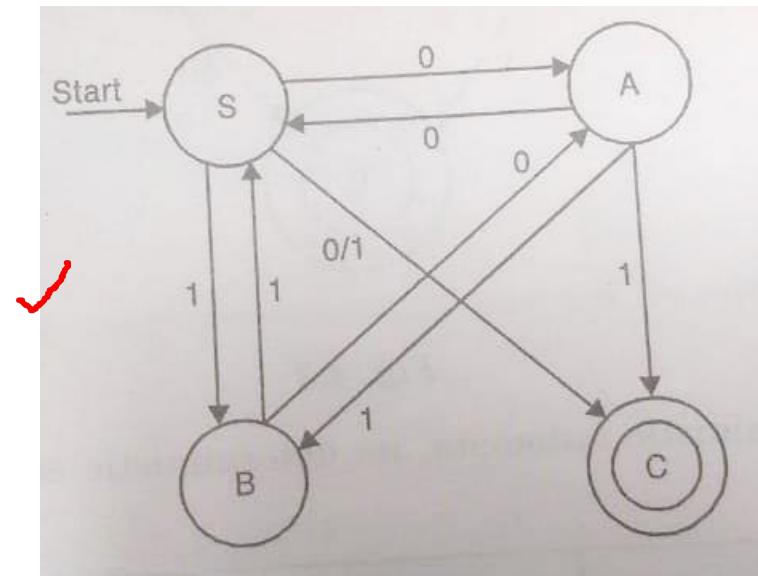

$S \rightarrow 0A \mid 1B \mid 0 \mid 1$

$A \rightarrow 0S \mid 1B \mid 1$

$B \rightarrow 0A \mid 1S$

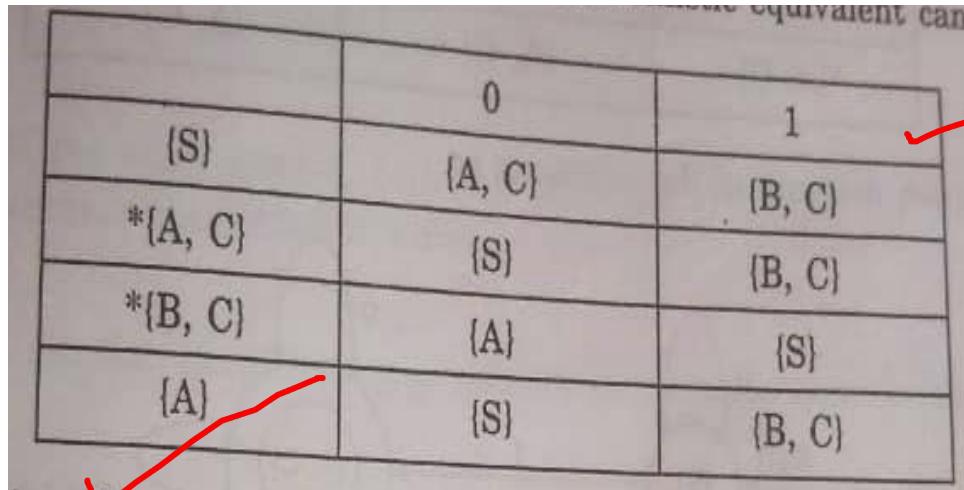

Transition Diagram for the Automata:-

It's a NDFA

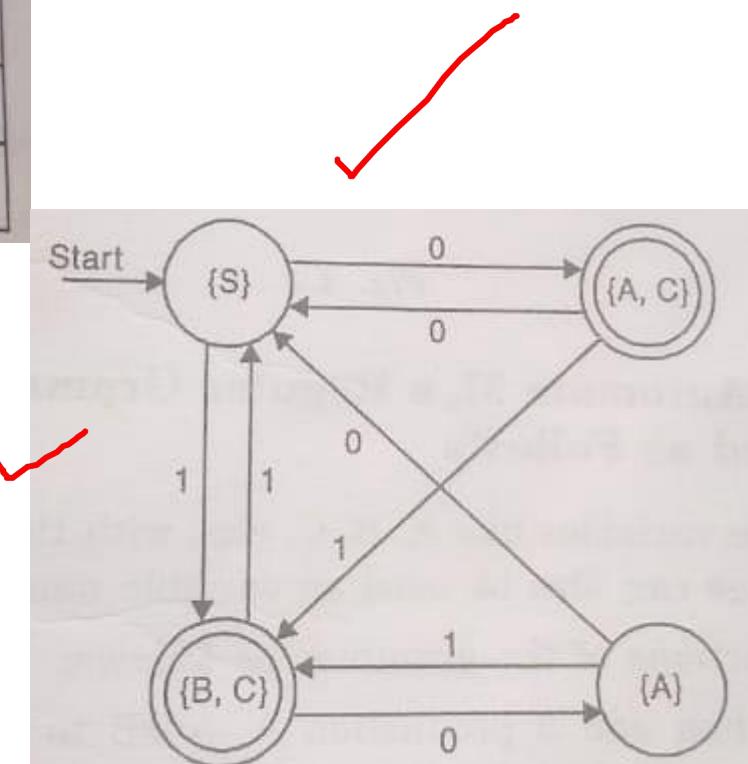

Equivalence of Regular Grammar and Finite Automata-Example 2

- The transition diagram for the Equivalent DFA is :

	0	1
(S)	{A, C}	{B, C}
*{A, C}	{S}	{B, C}
*{B, C}	{A}	{S}
{A}	{S}	{B, C}

Generating Regular Grammar from Given Finite Automata

- 1) Associate suitable variables like A,B,C with the states of the automata. The labels of the states can be used as variable names (V, Σ, F, S)
- 2) Obtain the productions of the grammar as follows:-
 - 1 - If $\delta(A, a) = B$, then add a production $A \rightarrow aB$ to the list of productions of the grammar.
 - 2 - If B is a final state, then add either $A \rightarrow a$ or $B \rightarrow \epsilon$ to the list of productions.
- 3) The variable associated with the initial state of the automata is the start symbol of the grammar

Generating Regular Grammar from Given Finite Automata -Example 1

- Consider a FA given below:-

$A \rightarrow 0B \mid 1C$
 $B \rightarrow 1A \mid \epsilon$
 $C \rightarrow 0A \mid 0$

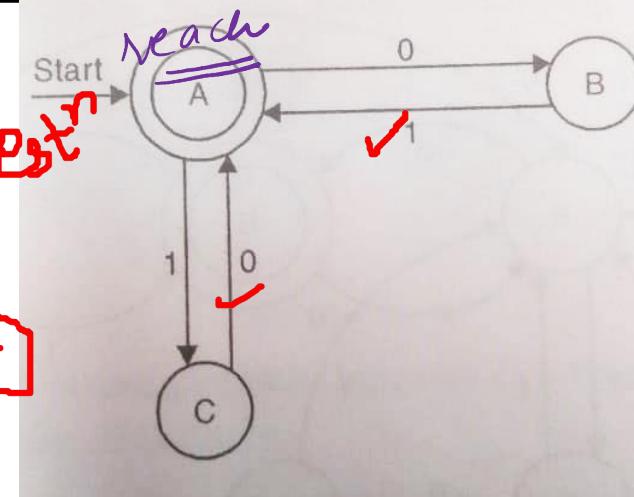

null
free

~~or~~

~~ϵ free~~
~~post~~
~~long~~

$A \rightarrow \alpha \mid \beta \rightarrow \epsilon$

$s(A, \alpha) = B$
 $+ \text{final}$

$A \rightarrow 0B \mid 1C$
 $B \rightarrow 1A$
 $C \rightarrow 0A$

=

~~with ϵ~~

~~with ϵ~~

Generating Regular Grammar from Given Finite Automata -Example 1

- Consider a FA given below:-

$A \rightarrow 0B \mid 1C \mid \epsilon$

$B \rightarrow 1A$

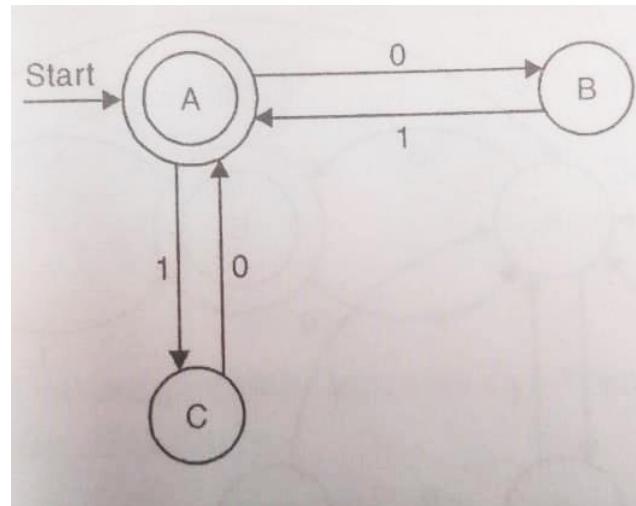

$C \rightarrow A$

or

$A \rightarrow 0B \mid 1C$

$B \rightarrow 1A \mid 1$

$C \rightarrow 0A \mid 0$

- Both the grammars are same,
- The first one contains ϵ transitions,
- The second one is ϵ free.

Generating Regular Expression from Regular Grammar

- 1) Replace -> symbol in the production by = symbol to get a set of equations
- 2) Solve the the set of equations obtained above to get the value of the variable S, where S is the start symbol of the grammar, The result is the regular expression specifying $L(G)$

Generating Regular Expression from Regular Grammar-Example 1

Consider the grammar:

$$S \rightarrow 0A \mid 0 \mid 1B$$

~~$$A \rightarrow 1A \mid 1$$~~

~~$$B \rightarrow 0B \mid 1S$$~~

$$\begin{aligned} A &= \underline{|A|} \quad \text{or} \quad A = \underline{|} \\ &= |A| \end{aligned}$$

$$\begin{aligned} B &= \underline{0B} \quad \text{or} \quad \underline{1S} \\ &= \underline{00B} \quad \text{or} \\ &= \underline{00B} \\ &= \underline{000B} \\ &= \underline{0000B} \dots |S| \end{aligned}$$

$$B \rightarrow \underline{0^*IS}$$

$$\begin{aligned} &= |1A| \\ &= ||1A| \\ &= |^*| = n \cdot 1 = | \end{aligned}$$

$$\begin{aligned} A &= |^*| \\ &= n \cdot 1 \end{aligned}$$

$$\begin{aligned} A &= n \cdot 1 \\ &\uparrow \end{aligned}$$

Generating Regular Expression from Regular Grammar-Example 1

Consider the grammar:

$S \rightarrow 0A \mid 0 \mid 1B$

$A \rightarrow 1A \mid 1$

$B \rightarrow 0B \mid 1S$

$S = 0A \mid 0 \mid 1B$

$A = 1A \mid 1$

$B = 0B \mid 1S$

$B = 0^* 1S$

$A = 1^* 1$

$S = 01^* 1 \mid 0 \mid 10^* 1S$

$S = (01^* 1 \mid 0) \mid (10^* 1S)$

$S = 10^* 1 \mid 0 \mid (01^* 1 \mid 0)$

$S = (10^* 1)^* (01^* 1 \mid 0)$

Regular Expression is

$(10^* 1)^* (01^* 1 \mid 0)$

$A \mid B \quad \pi \beta \mid \alpha$

$|0^* 1S$
 $|0^* 1 | 10^* 1S$
 $\xrightarrow{|0^* 1} (01^* 1 \mid 0)$

Regular Grammar

- Regular grammar is a formal grammar in which every production is restricted to have one of the following forms:-

~~LHS RHS~~
A->aB
A->~~a~~
—

A \rightarrow aB

A \rightarrow a

- where A and B are the non-terminals, a is a terminal symbol
- With ϵ productions permitted as special case when L(G) contains ϵ

$$G = (V, T, P, S)$$

~~Today's~~

Regular Grammar

Regular grammar is a type of grammar that describes a regular language.

This grammar can be of two forms:

- Right Linear Regular Grammar
- Left Linear Regular Grammar

Right Regular Grammar

Right Linear Regular Grammar

- In this type of regular grammar, all the non-terminals on the right-hand side exist at the rightmost place, i.e; right ends.

Example 1 :

- $A \rightarrow a,$
- $A \rightarrow a\overline{B},$
- $A \rightarrow \overline{\in}$
- where \overline{A} and B are non-terminals,
- a is terminal, and \in is empty string

Right Regular Grammar

Example 2 :

- $S \rightarrow 00B \mid 11S$
- $B \rightarrow 0B \mid 1B \mid 0 \mid 1$
- where ~~on S and B are non-terminals, and~~
~~are on right~~
- 0 and 1 are terminals

Left Regular Grammar

Left Linear Regular Grammar

- In this type of regular grammar, all the non-terminals on the right-hand side exist at the leftmost place, i.e; left ends.

Example 1 :

- $A \rightarrow a,$
- $A \rightarrow Ba,$
- $A \rightarrow \epsilon$
- where, A and B are non-terminals,
- a is terminal, and ϵ is empty string

Left Regular Grammar

Example 2 :

- $S \rightarrow B00 \mid S11$
- $B \rightarrow B0 \mid B1 \mid 0 \mid 1$
- where S and B are non-terminals, and
- 0 and 1 are terminals

left Reg Gram

Conversion of Right Linear Grammar to Left Linear Grammar

RLG

LLG

- 1) Obtain a regular expression for the language generated by the given grammar
- 2) Reverse the regular expression obtained in Step 1
- 3) ~~Obtain the regular/right linear grammar for the regular expression obtained in step 2 by drawing FA~~
- 4) ~~Reverse the right side of every production of the grammar obtained in step 3~~

The resultant grammar will be an equivalent left linear grammar

- ① RE
- ② RRE
- ③ FA (Draw) & RG (write/derive)
- ④ RHS \Rightarrow Rev

Conversion of Right Linear Grammar to Left Linear Grammar

- Consider Right Linear grammar:-

$$S \rightarrow 01B \mid 0$$

$$B \rightarrow 1B \mid 11$$

0 1

Find RE for B

$$B = 1B \mid 11$$

Case II

Case I

$$B = 1B$$

1 B

$$1 \cdot 1 \overbrace{B}$$

$$1 \cdot 1 \cdot 1 \overbrace{B}$$

RE

$$\text{String} 0 = (11)$$

$$1 \cdot (11)$$

$$\text{String} 1 = 1 \underline{B} \Rightarrow 1 \cdot (11)$$

$$1 \cdot 1 \underline{B} \Rightarrow 1 \cdot 1 \cdot (11)$$

$$1 \cdot 1 \cdot 1 \cdot \underline{B} \Rightarrow 1 \cdot 1 \cdot 1 \cdot (11)$$

① RE

$$S = 01B \mid 0$$

$$B = 1B \mid 11$$

$$S = 01B \mid 0$$

$$RE = 011^*(11) \mid 0$$

for the grammar/system

② RRE

$$(F + G)^R = F^R + G^R = G^R + F^R$$

$$\text{Concaten}(F \cdot G)^R = G^R \cdot F^R$$

$$(F^*)^R = (F^R)^*$$

$$RRE = (011^*(11) \mid 0)$$

$$RRE = (1^R \cdot 1^R \cdot (1^*)^R \cdot 1^R \cdot 0^R \mid 0^R)$$

$$= 1 \cdot 1 \cdot (1^R)^* \cdot 1 \cdot 0 \mid 0$$

$$= (1 \cdot 1 \cdot 1^* \cdot 1 \cdot 0 \mid 0)$$

$$B = 1^*(11)$$

Conversion of Right Linear Grammar to Left Linear Grammar

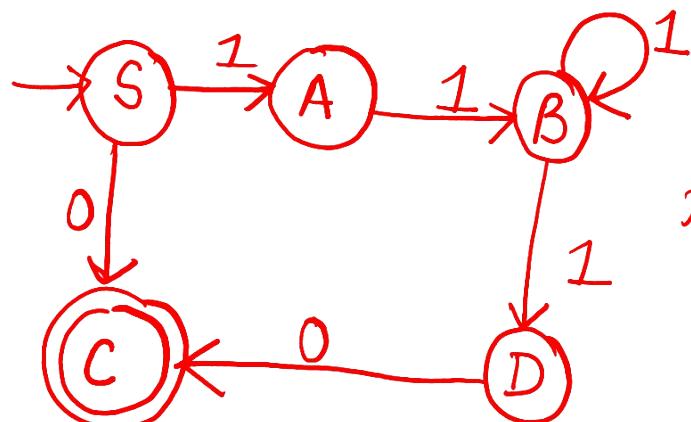

- Consider Right Linear grammar:-

$$S \rightarrow 01B \mid 0$$

$$B \rightarrow 1B \mid 11$$

② (1|1|1*|10|0) Reverse RE

③ Draw FA & write Grammars

$$S \rightarrow 1A \mid 0C \mid 0$$

$$A \rightarrow 1B$$

finite automata $\xrightarrow{B} 1B \mid 1D$

$$D \rightarrow 0C \mid 0$$

C is a useless state, remove C from productions

RHS

$$S \rightarrow 1A \mid 0$$

$$A \rightarrow 1B$$

$$B \rightarrow 1B \mid 1D$$

$$D \rightarrow 0$$

Replace the value of D

$$S \rightarrow 1\underline{A} \mid 0$$

$$A \rightarrow 1\underline{B}$$

$$B \rightarrow 1\underline{B} \mid 10$$

Rept Substitute
value of A in S

$$S \rightarrow 11B \mid 0$$

$$B \rightarrow 1B \mid 10$$

Reduced
Grammar

$$\textcircled{7} \quad S \rightarrow \underline{B}11 \mid 0$$

$$B \rightarrow \underline{B}1 \mid 01$$

left
RHS

Conversion of Right Linear Grammar to Left Linear Grammar

- Consider Right Linear grammar:-

$S \rightarrow 01B \mid 0$

$B \rightarrow 1B \mid 11$

Obtain a regular expression

$S = 01B \mid 0$

$B = 1B \mid 11$

$B = 1^*(11)$

$S = 011^*(11) \mid 0$

Regular Expression = $(011^*(11)) \mid 0$

Reversal of a Regular Expression

- **Basis:** If E is a symbol a , ϵ , or \emptyset , then $E^R = E$.
- **Induction:** If E is
 - $E=F+G$, then $E^R = F^R + G^R$.
 - $E=FG$, then $E^R = G^RF^R$
 - $E=F^*$, then $E^R = (F^R)^*$.

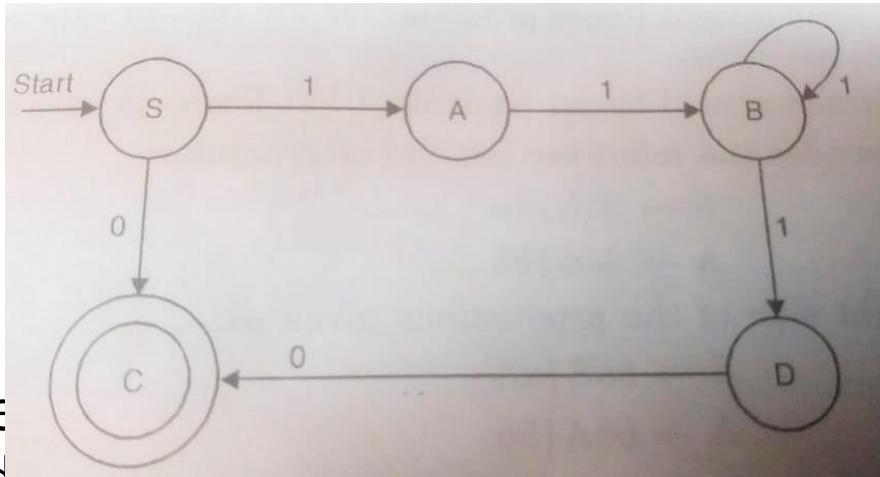

Conversion of Right Linear Grammar to Left Linear Grammar

Regular Expression= $(011^*(11)|0)$

Reverse Regular Expression= $(0|(11)1^*10)=(0|111^*10)$

Conversion of Right Linear Grammar to Left Linear Grammar

- Reverse Regular Expression= $(0|(11)1^*10)=(0|111^*10)$
- Finite Automata accepting the language specified by the RE

- Thus, the language accepted by the FA is.
- $S \rightarrow 1A|0C|0$
- $A \rightarrow 1B$
- $B \rightarrow 1D|1B$
- $D \rightarrow 0C|0$

Conversion of Right Linear Grammar to Left Linear Grammar

- Thus, the right linear grammar generating the language accepted by the FA is:

$S \rightarrow 1A \mid 0C \mid 0$

$A \rightarrow 1B$

$B \rightarrow 1D \mid 1B$

$D \rightarrow 0C \mid 0$

- Since C is not useful eliminating C gives:-

$S \rightarrow 1A \mid 0$

$A \rightarrow 1B$

$B \rightarrow 1D \mid 1B$

$D \rightarrow 0$

Conversion of Right Linear Grammar to Left Linear Grammar

$S \rightarrow 1A | 0$

$A \rightarrow 1B$

$B \rightarrow 1D | 1B$

$D \rightarrow 0$

This can be further simplified

$S \rightarrow 1A | 0$

$A \rightarrow 1B$

$B \rightarrow 1B | 10$

Further simplified as

$S \rightarrow 11B | 0$

$B \rightarrow 1B | 10$

Conversion of Right Linear Grammar to Left Linear Grammar

$S \rightarrow 11B | 0$

$B \rightarrow 1B | 10$

Reversing the right side of the productions give:

$S \rightarrow B11 | 0$

$B \rightarrow B1 | 01$

Which is equivalent Left Linear grammar

Obtaining Right Linear Grammar Equivalent to a Given Left Linear Grammar

LLG → RLG

- 1) Reverse the right side of every production of the given grammar
- 2) Obtain a regular expression for the language generated by the grammar obtained in step 1
- 3) Reverse the regular expression obtained in Step 2
- 4) Obtain the regular/right linear grammar for the regular expression obtained in step 3

The resultant grammar will be an equivalent left linear grammar

- ① RHS Reversing
- ② RE
- ③ RRE
- ④ FA (Draw) & Write/Derive (Grammar)

Conversion of Left Linear Grammar to Right Linear Grammar

RHS

Consider the following Left Linear Grammar:-

$$S \rightarrow S \underline{ab} | Aa$$

① RHS reversal

$$A \rightarrow A \underline{bb} | bb$$

$$\begin{array}{l} S \rightarrow ba \underline{S} | aA \\ A \rightarrow bb \underline{A} | bb \end{array}$$

② RE occur Case II

$$S_1 = b \cdot b (bb) b \cdot b \cdot A$$

$$S_2 = b b \cdot b \cdot b (bb) b \cdot b \cdot b \cdot A$$

$$S_3 = \begin{array}{c} 2 \text{ occur } b \cdot b \quad b \cdot b \\ b \cdot b \quad b \cdot b \quad b \cdot b (bb) \end{array} \quad \begin{array}{c} b \cdot b \\ b \cdot b A \end{array}$$

3 occurrences

$$A = (bb)^* \cdot (bb)$$

$$S = ba \underline{S} | a (bb)^* (bb)$$

term
var

terminals

RE

$$S = (ba)^* a (bb)^* (bb)$$

$$(F^*)^R = (F^R)^*$$

$$ba \underline{s}$$

$$ba \overbrace{ba}^s$$

$$bab \overbrace{a}^s$$

$$bab \overbrace{a}^s$$

③ RRE

$$S = ((ba)^* a (bb)^* (bb))^R$$

$$(F \cdot R G)^R = G R \cdot F R$$

$$= (bb)^R \cdot ((bb)^*)^R \cdot a^R \cdot ((ba)^*)^R$$

$$= (bb) \cdot (bb)^* \cdot a \cdot (ab)^*$$

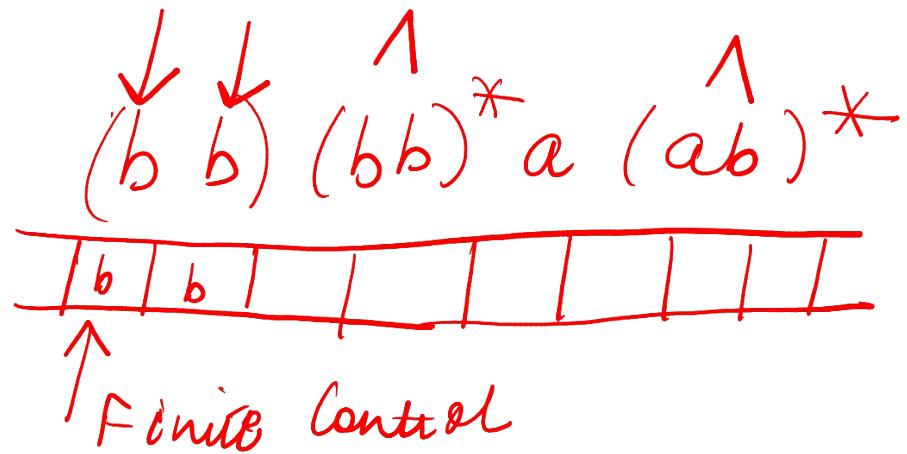

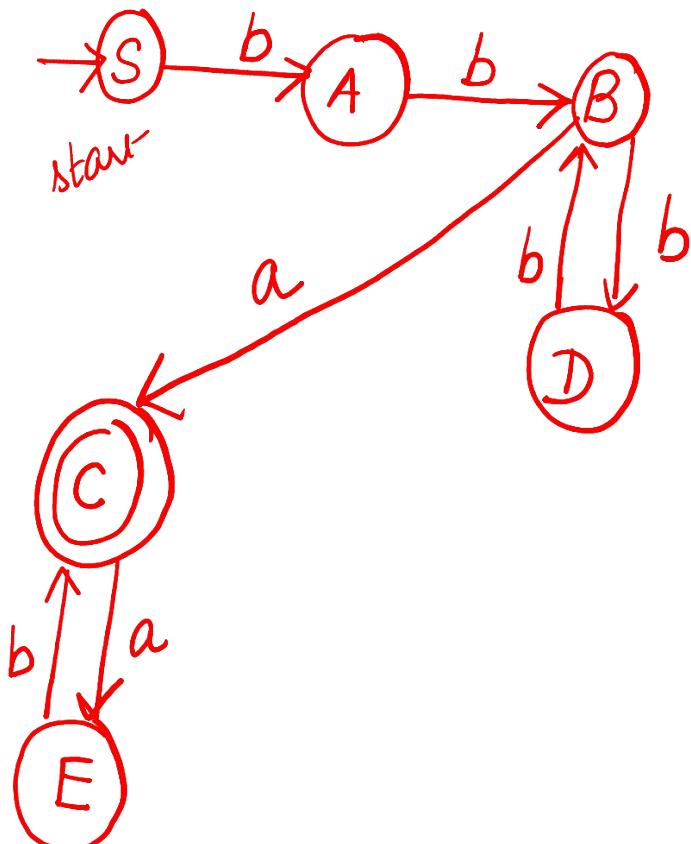

RRF

Conversion of Left Linear Grammar to Right Linear Grammar

Consider the following Left Linear Grammar:-

$$S \rightarrow Sab \mid Aa \quad RRE \Rightarrow (\underline{\underline{bb}}) (\underline{\underline{bb}})^* a (\hat{ab})^*$$

A->Abb|bb ④ FA(draw) = derive Grammar bba => final

Conversion of Left Linear Grammar to Right Linear Grammar

Consider the following Left Linear Grammar:-

$S \rightarrow Sab \mid Aa$

$A \rightarrow Abb \mid bb$

Reversing the right side of the productions gives us:

$S \rightarrow baS \mid aA$

$A \rightarrow bbA \mid bb$

Obtain the Regular expression specifying the language -

$S = baS \mid aA$

$A = bbA \mid bb$

We get $A = (bb)^* bb$

$S = baS \mid (a(bb)^* bb)$

$S = (ba)^* (a(bb)^* bb)$

Reversed RE = $(bb (bb)^* a)(ab)^*$

Conversion of Left Linear Grammar to Right Linear Grammar

RE=(bb (bb)*a)(ab)*
FA for the Reversed RE

Regular Grammar for the FA

S->bA

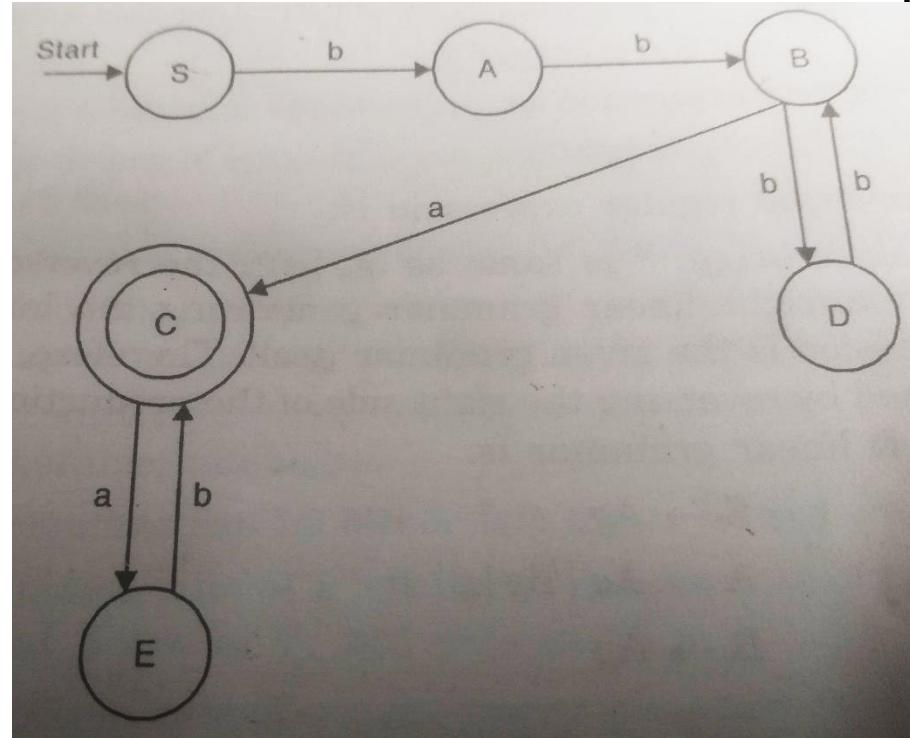

A->bB

B->cA|bD|a

D->bB

C->aE

E->bC|b

baf → EbaE/b
baf → B→aC/bD/a
baf → B→aaE/bD/a

Conversion of Left Linear Grammar to Right Linear Grammar

Regular Grammar for the FA

$S \rightarrow bA$

$A \rightarrow bB$

$B \rightarrow cA \mid bD \mid a$

$D \rightarrow bB$

$C \rightarrow aE$

$E \rightarrow bC \mid b$

can be reduced to:

$S \rightarrow bbB$

$B \rightarrow aaE \mid bbB \mid a$

$E \rightarrow baE \mid b$

Required Right Linear Grammar

Conversion of Left Linear Grammar to Right Linear Grammar

Regular Grammar for the FA

$$S \rightarrow bA$$

$$A \rightarrow bB$$

$$B \rightarrow cA \mid bD \mid a$$

$$D \rightarrow bB$$

$$C \rightarrow aE$$

$$E \rightarrow bC \mid b$$

can be reduced to:

$$S \rightarrow bbB$$

$$B \rightarrow aaE \mid bbB \mid a$$

$$E \rightarrow baE \mid b$$

Required Right Linear Grammar

$$S \rightarrow b b B$$

$$E \rightarrow b a E \mid b$$

Conversion of Left Linear Grammar to Right Linear Grammar

Exercise

Consider the following grammar:

$S \rightarrow gA$

$A \rightarrow aA \mid gB \mid g$

$B \rightarrow gA$

Obtain an equivalent left linear grammar

Obtain RE for above grammar:-

$S = gA$

$A = aA \mid gB \mid g$

$B = gA$

Substituting the value of B in A

$S = gA$

$A = aA \mid ggA \mid g$

$A = (a \mid gg)A \mid g$

$A = (a \mid gg)^*g$

$S = g(a \mid gg)^*g$

Regular Expression = $g(a \mid gg)^*g$

Conversion of Left Linear Grammar to Right Linear Grammar

Exercise

Regular Expression= $g(a|gg)^*g$

Reversed Regular Expression= $g(gg|a)^*g$

But since $(a|gg)^*$ is same as $(gg|a)^*$

The reversed regular expression is same

Hence the regular/right linear grammar generated by the reverse RE is the given grammar itself

An equivalent left linear grammar can be obtained by reversing the right side of the production of the given grammar

Thus, Equivalent left linear grammar is

$S \rightarrow Ag$

$A \rightarrow Aa | Bg | g$

$B \rightarrow Ag$
