Batch:E-2	Roll No.: 16010123325
Experiment No. 01	

TITLE: Design the static web pages with the help of HTML5

AIM: To create static Web Pages using HTML5.
_____

Expected Outcome of Experiment: Design static web pages using various HTML tags.
_____

Books/ Journals/ Websites referred:

1.   .

_____

The students are required to design Web Application using various technologies. A group of 2-3 students will select a topic and will design a web application. Various concepts such as static page, dynamic page, connection with a backend database are essential part of the application.

Students will be required to mention overall description of the problem (website facilities) to be provided by their application.

Problem Statement:

< Explain in words what facilities / functionalities your application is expected to support>
The application supports:

1. **User Registration**: Secure form to collect and validate user details.
2. **Data Display**: Organized tables for information like listings or user data.
3. **Search and Input Forms**: To query or submit information.
4. **Navigation**: Intuitive layout for seamless page access.
5. **Visual Design**: Styled content with headings, images, and text for readability.
6. **Dynamic Interactions**: Buttons for actions like submission and navigation

Description of the application implemented with output:

< Add screen shots of the pages here>

Book Catalogue

Post Lab Objective with Ans (Min 5):

HTML tags Used :

<Tabulate all the HTML tags you have used to create the page, mentioning the usage>

Here is a tabulated summary of the HTML tags used in your pages, along with their usage:

HTML Tag	Usage

HTML Tag	Usage Description
<!DOCTYPE html>	Defines the document type and version of HTML.
<html>	Root element of an HTML document.
<head>	Contains meta-information about the document.
<meta>	Specifies metadata such as character set and viewport settings.
<title>	Sets the title of the document, shown in the browser's title bar or tab.
<style>	Contains CSS styles for the document.
<body>	Contains the content of the HTML document.
<header>	Defines a header section for the document or a section.
<h1>	Defines the main heading of the document.
<nav>	Defines a navigation section with links.
<a>	Defines a hyperlink.
<main>	Specifies the main content of the document.
<section>	Defines a section in the document.
<h2>	Defines a subheading.
<p>	Defines a paragraph.
<div>	Defines a division or section in the document.
<table>	Defines a table.
<thead>	Groups the header content in a table.
<tr>	Defines a row in a table.
<th>	Defines a header cell in a table.
<tbody>	Groups the body content in a table.
<td>	Defines a cell in a table.
